Professional Life Practice – Exploring Your Practice

Project Brief

This unit will be assessed holistically.

The Professional Life Practice module serves as an essential foundation for developing collaborative and interdisciplinary skills among undergraduate students at Ravensbourne. This module aims to bridge the gap between academic learning and real-world application, particularly within the computing sector.

Project Description:

This project focuses on the development of a multidisciplinary experience that integrates emerging professional practices and collaboration across disciplines. Participants will explore and experiment with various aspects of their professional practice to design and build an experience that reflects their evolving skills and knowledge. The emphasis will be on developing creative and reflective abilities while engaging with industry-relevant challenges. Students will demonstrate their ability to ideate, prototype, and reflect on their practice within the broader professional context.

The project highlights the importance of cross-disciplinary collaboration, creative problem-solving, and reflective practice in creating impactful solutions. It encourages students to actively engage with industry trends and personal development while considering their professional growth and employability.

The solution will be rigorously assessed based on its innovation, feasibility, and alignment with professional practice standards. Throughout the project, participants will utilise appropriate methodologies to achieve their project goals.

The proposed project idea will focus on the practical applications of professional exploration in a real-world context.

Your project will include the following deliverables:

1. A group presentation of the artefact demonstrating the project process and outcomes.
2. An independent learning journal documenting the project's objectives, research, design, and implementation.

Assessment criteria:

Learners will be assessed based on the following key criteria:

- Appropriateness of the project idea in relation to professional practice goals.
- Effectiveness in identifying and specifying project requirements and objectives.
- Competence in designing and implementing the project using relevant methods.
- Application of creative and reflective skills in the development process.
- Demonstration of collaboration and interdisciplinary engagement.
- Thorough documentation and critical reflection on the project's development and impact.

Other useful information

Your work should be referenced using the Harvard referencing system. Please also provide a bibliography using the Harvard referencing system.

Assessment and tutor feedback date

Internal completion of marking (TBD).
Moderation and release to students (TBD).

Unit Learning outcomes (including relevant principle from Mindsets and Skillset, from Unit specs)

LO_1	Develop an idea of which landscapes they want to be a part of. Assessment Criteria: Explore, Research and Analysis.
LO_2	Develop a portfolio of what ideas you thought about and how they could contribute in real life scenarios. Assessment Criteria: Explore, Critical Thinking and Reflection.
LO_3	Evidence developing technical skills and competencies. Assessment Criteria: Create and Technical Competence.

Assessment Methods and Tasks

More detailed assessment tasks to be specified in the brief		
Assessment tasks	Submission Method	Weighting %
Group presentation of the artefact	Producing and Presentation of Artefact	50%
Independent Learning Journal	Uploaded to Canvas	50%

The Five Principles

The Five Principles underpin the Mindsets and Skillsets Manifesto and are the foundation upon which all course curriculum frameworks and unit specifications are based. The relevant Principles as stated below have been mapped against the Learning Outcomes relevant to each course unit and at each level (see Programme Specifications for full description of the Five Principles):

Cultivate	Where the individual thrives.
Collaborate	Where the individuals evolve.
Integrate	Where education engages industry.
Advocate	Where purpose meets practice.
Originate	Creativity meets technology.

Submission Regulations

Students who miss the deadline or fail this project will be required to complete a retrieval project which demonstrates that the learning outcomes have been achieved.

Students should be aware that retrieval submissions are capped at a bare pass grade, (D-) unless the extenuating circumstances panel uphold an evidenced application.

The deadline for retrieval submissions will be determined at an Assessment Board.
